

GILBARCO PASSPORT

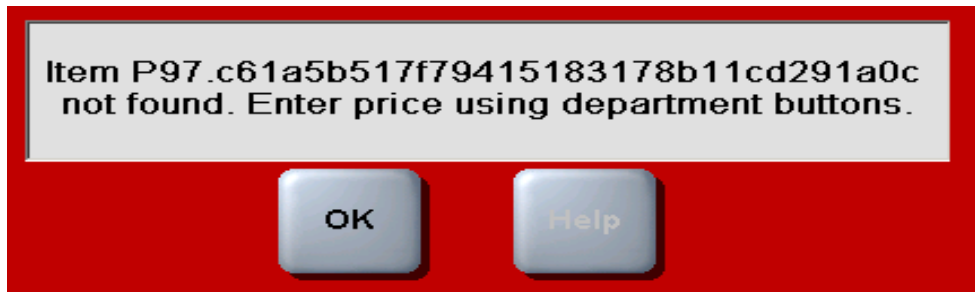

HOW TO TEST IF A SCANNER IS CONFIGURED TO RECOGNIZE A QR CODE

While in Cashier's screen:

- Scan this QR Code as if you were ringing up a product

- If the QR code was read, the following message should display:

- Click OK to clear the message
- If the scanner just beeps, the scanner did not read the QR code. Your next steps are:
 1. Contact your technician to ensure you have a 2D scanner.
 2. If your technician indicates your scanner is a 2D scanner, have them assist you with configuring it to read QR codes.
 3. If your technician indicates your scanner is not a 2D scanner, one can be purchased from the local Gilbarco installer, or a pre-configured scanner can be purchased directly by utilizing a Phillips 66 discount program through Techquidation for \$238.
