

MOBILE PAYMENTS READINESS CHECKLIST

○ Check your EPOS system.

VERIFONE COMMANDER & GILBARCO PASSPORT

If you have the Verifone Commander or the Gilbarco Passport EPOS system, you're qualified for Mobile Pay functionality immediately. Other EPOS vendors may offer mobile payment functionality in the future, but Verifone and Gilbarco are the current focus.

○ Prepare for installation.

VERIFONE COMMANDER

- Install 1.07.19 (aka 44.19).
- Have programmed and working QR-compatible 2D bar code scanner.
- Ensure install technician configures mobile payment at time of initial installation.
- Upgrade to LinkSafe 2.0 if you have not already (highly recommended for mobile; required by end of 2018).
- Wait for mobile payments to be enabled remotely once the app work is complete and ready for implementation.
- KickBack® sites will need to be on Commander Base 47 software when available.

GILBARCO PASSPORT

- If you are on v8 or v10, install v11.01G, available January 2018.
- If you are on v11.01C-v11.01F, upgrade to v11.01G by contacting the Phillips 66 Customer Assistance Team. They will provide detailed instructions.
- Have programmed and working QR-compatible 2D bar code scanner.
- Upgrade to LinkSafe 2.0 if you have not already (highly recommended for mobile; required by end of 2018).
- Wait for mobile payments to be enabled remotely once the app work is complete and ready for implementation.

○ Determine if you need to upgrade.

Some upgrades (i.e., EMV) may require a technician. Sites that do not have a QR-compatible 2D bar code scanner can purchase one through the Phillips 66 discount program with Techquidation, or will need to contact their local EPOS distributor to purchase one to process mobile payments inside the store. Customers should contact their EPOS vendor or local distributor/service technician to determine the work effort and cost associated with these upgrades. The Phillips 66 Customer Assistance Team is also available to answer questions regarding payment systems updates.

Need to test if your QR scanner is compatible with Mobile Pay?
